Wide range of materials for each unique screen installation, Seamless, Washable! **Call for custom sizes and aspect ratios.**

High Contrast Grey V2.0

Deeper black levels, improved color saturation, sharper images produced by higher contrast. Flat surface improves contrast by absorbing unwanted ambient light and reflecting projected light back to the audience. Great for rooms with some ambient light. Finely ground reflective materials provide the perfect surface for 1080p video and higher resolutions.

Bright White 1.3 V2.0

Generally used in blacked-out rooms. For accurate color output and bright images. 30% more light reflected for on axis viewing. Finely ground reflective materials provide the perfect surface for 1080p video and higher resolutions.

Also available —Grey vision, Ultra Contrast Grey V2.0 & Deluxe 3D—Call for guidance!

Screen material attaches to frame by four rods inserted through pockets on each side of the screen material. The rods attach to the screen frame and holds the screen material perfectly tensioned across the whole viewing surface. Unlike snaps or Velcro this tensioning method will last for life of the screen and hold tension evenly even if disassembled and reassembled. Unlike grommet and lace this tensioning system is fast and easy to assemble.

All screen materials are made in the USA. All screen treatments and optical coatings are applied in house by Severtson Corporation.

Enjoy a masterpiece in your dedicated home theater, boardroom, or other locations with the workmanship and contour of the Severtson *Signature Deluxe*.
